

Custom Wood Gates

WOOD PRIVACY GATES

Our wood privacy gates are constructed using traditional construction methods

- Mortise and tenon joinery
- Tongue and groove floating panels.

Privacy gates are offered in common sizes or we will build a gate to your custom dimensions.

All gates constructed from Clear Red Western Cedar.

Western Red Cedar:

- Superior resistance to rot and insects
- Excellent dimensional stability over time.

Professional Grade Latches and Hinges included with every gate

Tongue and Groove Slats:

- Prevent rattling
- Allows for expansion and contraction of wood due to seasonal differences

Interlocking construction:

- Increases gate stability
- Allows for the natural movement of wood due to humidity changes throughout the year

Mortise and Tenon Joinery for a highly stable wood gate frame

We use Mortise and Tenon Joints for long term stability and strength. It gives a very clean appearance, without visible nails or screws to rust and loosen.
